

A List of Utah Sites Currently Undergoing Superfund Program Investigation or Remediation

Report Date: Wednesday, November 08, 2000

Site Name 1700 NORTH BECK STREET PLUME

Address 1700 NORTH BECK STREET

City SALT LAKE CITY

County SALT LAKE

ZipCode 84104

Site Description

Contact: Not Assigned (801) 536-4100

A plume of groundwater, contaminated with a variety of chlorinated hydrocarbons, was identified as a result of monitoring being performed at the Petrochem/Ecotek site. The plume contains TCE, TCA, and PCE above drinking water standards, as well as DCE, DCA, Vinyl Chloride, and other chlorinated organics. The plume appears to originate northeast of Beck Street near Save Most Self Storage and a Monroc manufacturing facility. Groundwater samples from monitoring wells constructed near Save Most Self Storage (1674 North Beck Street) are contaminated with chlorinated organics; however, the source of the contamination has not been firmly tied to Save Most Self Storage.

Address 1900 WEST NORTH TEMPLE

City SALT LAKE CITY

County SALT LAKE

ZipCode 84116

Site Description

Contact: Phillip Greer (801) 536-4246

Contamination was detected in three, eight foot deep borings conducted by a consulting firm during an environmental assessment of a hotel expansion project. Levels of heavy metals were detected as follows (units are ppm) barium 5.86, arsenic 0.78, chromium 0.78, lead 1.17, selenium 2.66 it is known that historically a gun club operated in this area.

SALT LAKE CITY NORTH

Site Name	2100 S. AND HIGHLAND DR. PLUME			
Address	2100 SOUTH HIGHLAND DRIVE			
City	SALT LAKE CITY	County	SALT LAKE	ZipCode 84105
Site Description	Contact: J.D. Keetley (801) 536-4130			
TCE and PCE were discovered in ground water during site investigations of two auto and tire repairs south of the above intersection. A large laundry and dry cleaner was located upgradient for approx. 50 years. Several auto repairs and tire stores are in the vicinity. The laundry burned down in the 1980's, now is a vacant lot. Plans are to build a shopping center on this block over the plume. A shopping district exists south of the site.

Site Name	3737 WEST 2100 SOUTH SOLVENT PLUME			
Address	3737 WEST 2100 SOUTH			
City	WEST VALLEY	County	SALT LAKE	ZipCode 84120
Site Description	Contact: Not Assigned (801) 536-4100			
Chlorinated solvents in groundwater were confirmed through sampling as a LUST site in West Valley City, Facility ID#4000315. Currently the site is being regulated under the Petroleum Storage Tank (PST) program's jurisdiction as a result of a known petroleum release which occurred at the end of March, 1996. No known source was identified as a potential contributor to the chlorinated solvent contamination. The solvents are not in the immediate area of the petroleum contamination, and thus is not likely they will be addressed by the PST Section. The division of Solid and Hazard Waste has referred it to the CERCLA Site Assessment Branch of the DEQ's Division of Environmental Response and Remediation. The solvents include Benzene, Trichloroethene, 1,1- and 1, 2-Dichloroethanes, Methylene Chloride and 1, 1, 1-Trichloroethane. Some were found at levels above SCDM's MCL's. Ames Construction deals in heavy machinery and construction work.

TCE was discovered in ground water during an investigation of the VDO Fuel, Inc. LUST site at 4490 S. Highland Drive. A gas station has occupied this property since 1934. A dry cleaner operated across the street at 4479 S. Highland Dr. between 1959 and 1976. The dry cleaner building is now occupied by a photography studio.

Site Name	4800 SOUTH AND HIGHLAND DRIVE PLUME			
Address	4800 SOUTH HIGHLAND DRIVE			
City	HOLLADAY	County	SALT LAKE	ZipCode 84117
Site Description	Contact: J.D. Keetley (801) 536-4100			
The 4800 South Highland Drive Plume is located in Holladay. The name by which this plume is referred to indicates the specific location where the ground water is believed to be contaminated with perchloroethylene/trichloroethylene. The site is characterized mainly as a mixed, commercial/retail area surrounded by residential communities. There are several UST sites near the location of the plume. They include a Rainbo service station, a 7-Eleven convenient store, a Q-lube facility, and a firestone service station about .5 miles south of the site. Cottonwood Mall, which is a retail clothing/appliance department store, and Cottonwood square are immediately adjacent to the plume. Cottonwood square contain a bank, a dry cleaning facility and other novelty stores. Also near the site are a number of fast food as well as family style restaurants. There are no residences located on or immediately adjacent to the site.

403957	1115019	4501791	429120	SUGAR HOUSE

Site Name	5800 SOUTH STATE ST PLUME			
Address	5800 SOUTH STATE STREET			
City	MURRAY	County	SALT LAKE	ZipCode 84107
Site Description	Contact: Not Assigned (801) 536-4100			
The site is currently a commercial/retail and light industrial area consisting of several car dealerships, a cabinet manufacturing facility, a car repair shop, a dry cleaner, and several "fast food" restaurants. 3 underground storage tanks were removed from the Larry H. Miller Toyota property in 1991. During sampling related to the tank removal PCE was detected in the ground water. Subsequent sampling and analysis revealed that the contamination was coming from an off-site source. Further sampling and analysis showed what appeared to be 2 plumes, both starting on the east side of State Street.

403840	1115316	4499456	424934	SALT LAKE CITY SOUTH

Site Name	6200 SOUTH 2000 EAST PLUMES			
Address	6200 SOUTH 2000 EAST			
City	HOLLADAY	County	SALT LAKE	ZipCode 84088
Site Description	Contact: Alan V. Jones (801) 536-4287			
The plume is located in Salt Lake City in a commercial area near several residential subdivisions. There are two known PCE plumes in this area that are downgradient of a contaminated Salt Lake City well. The well is known to have PCE contamination with values up to 9.3. The City well is not believed to have been constructed to today's standards. It is believed that the annular space around the well was not sealed from the upper aquifer and is now acting as a drain. This would explain the contamination in the deeper aquifer.

Site Name A & C SALVAGE

Address 175 SUGAR FACTORY LANE

City CENTERFIELD

County SANPETE

ZipCode 84622

Site Description

Contact: J.D. Keetley (801) 536-4130

A & C Salvage site encompasses about 23 acres. The site topography is flat, with half the property being used for salvage operations and the other half used to cultivate hay for private use. The site has a "junk yard" appearance. There are about 80 salvageable vehicles on-site along with other assorted scrap metals. There are two homes on the property, one trailer and three large concrete masonry unit storage buildings. A two foot high earthen berm has been constructed west of the area of past PCB contamination and east of the Oil Field Canal. This was constructed to prevent run-off from the contaminated area from entering the canal.

Site Name	BAY AREA REFUSE DISPOSAL SITE #1			
Address	1700 N 1200 W			
City	BOUNTIFUL	County	DAVIS	ZipCode 84010
Site Description	Contact: Not Assigned (801) 536-4100			
The Bay Area Refuse Dilposal Landfill site occupies approximately 30 acres owned by the city of Bountiful. The BARD Landfill was constructed in 1959 and has received municipal wastes since about 1963. Limited information is available on the types and characteristics of wastes deposeted in the BARD Landfill. It reportedly was the only disposal facility for local industries for many years, and several industries in the area generate hazardous waste. Wastes generated from nearby oil refineries were suspected of being disposed in the landfill at one time.

Address	1300 WEST 2200 NORTH			
City	SALT LAKE CITY	County	SALT LAKE	ZipCode 84116
Site Description	Contact: Doug Compton (801) 536-4146			
Site is a old waste oil/sludge dump for the EKO-Tek NPL site located 2 miles to the south-east. There are numerous mounds of petroleum waste material that is piled south of the Oil Drain Canal, and south of a ten acre wetland. Ground water in the area is less that a few feet below ground surface. There is reason to believe that there is also waste petroleum material in the construction waste landfill located immediately to the east of the site.

Address	ONE-HALF MI NORTH OF LEEDS				
City	LEEDS	County	WASHINGTON	ZipCode	84746
Site Description	Contact: Alan (Al) M. Jones (801) 536-4115				
Mines for uranium and silver previously operated at these sites. A radiological survey conducted by A.V.I. Professional Corporation for the Utah Division of Oil, Gas and Mining identified radium 226 levels of 91 pCi/g in Big Hill Mine waste and 60 pCi/g in Chloride Chief mine waste. The sites are unsecured. Four homes are located within about 1000 feet of the Big Hill Mine. Three homes are located within 1000 feet of the Chloride Chief Mine with the closest being within 300 feet. Both mines are currently owned by 5M Inc. The Preliminary Assessment for this site was approved by EPA on 4/21/99. A Site Inspection will be conducted on this site during SFY2000.

Site Name BINGHAM RESERVOIR

Address 1/2 MILE EAST OF COPPERTON

City COPPERTON

County SALT LAKE

ZipCode 84006

Site Description

Contact: Not Assigned (801) 536-4100

The Large Bingham Reservoir Site is located within the east-west trending Bingham Creek drainage and encompasses an area approximately 1/2 mile in length and 1/4 mile wide. Kennecott Corporation and the State of Utah brought the Site to the attention of EPA. EPA believes that the heavy metals content of tailings and sludge found at the Site, specifically lead and arsenic, may be related to ground water contamination in the area. The reservoir was constructed in 1965 to serve as a surge basin for excess leach waters and to collect and store storm water runoff from areas in Bingham Canyon. The sediments accumulated in the reservoir are composed of sludge from leach water and preexisting tailings. The sludge and tailings contain heavy metals.

Site Name BLAND LANDFILL

Address 2100 S 6225 W

City WEST VALLEY CITY

County SALT LAKE

ZipCode 84084

Site Description

Contact: Not Assigned (801) 536-4100

The Bland Landfill site was used as a construction debris landfill for an unknown number of years in an area of the Jordan River Valley. The site area consists of salt marshes, alkali flats, and large areas of salt grasses which are drained by numerous creeks. Salt Lake County records indicate a long history of regulatory problems at the site with failure to timely cover waste and acceptance of liquid waste being two of particular interest. The landfill accepted municipal, construction and hazardous waste material from 1976 to 1984 and is currently inactive. There are no records describing the wastes deposited at the site; however, Salt Lake County inspection reports and citizen complaints indicate that an unknown quantity of septic sludge, oily wastes and other liquids were disposed of on-site. Also, 55-gallon drums and pesticide containers have been observed on-site and were noted in the initial site inspection.

BOUNTIFUL PEAK

Site Name	BOUNTIFUL/WOODS CROSS 5TH SOUTH PCE PLUME			
Address	500 SOUTH 800 WEST			
City	BOUNTIFUL	County	DAVIS	ZipCode 84087
Site Description	Contact: Not Assigned (801) 536-4100			
The plume is located in the City of Bountiful and Woods Cross. The area is in a commercial and residential area that is becoming more commercial as time progresses. The plume of PCE and TCE at the Phillips Refinery had been determined to be between 500 and 100 feet across. Utah RCRA investigations of the site indicate that the source is up-gradient of the refinery towards a dry cleaners approximately 2500 feet to the east. Between the dry cleaners and the refinery are a number of small businesses. There are eleven municipal drinking water wells within one mile of the suspected source, and 1/4 mile from the plumes leading ledge.

Address	8400 W. BUTTERFIELD CANYON ROAD			
City	HERRIMAN	County	SALT LAKE	ZipCode 84065
Site Description	Contact: Not Assigned (801) 536-4100			
Site land serves as a buffer area around Bingham Canyon Mine. The site is adjacent to the public road and the general area is used by the public for recreational purposes. Waste rock resulted from driving of the Butterfield Tunnel and from underground mining of lead/zinc ore from mines connected to the tunnel. The Butterfield Mine Site consists of a mine portal, mine wastes, and the remains of a few old structures. At the site, tailings and rock waste from the mine were deposited on both sides of Butterfield Canyon. Butterfield Creek flows directly through these tailings. Mines and mining prospects are common in the region surrounding the site.

Site Name	COLTON RAILYARD			
Address	6 MI SE OF SOLDIER SUMMIT			
City	COLTON	County	UTAH	ZipCode 84526

Site Description	Contact: Alan V. Jones (801) 536-4287
-------------------------	--

The Colton Railyard occupied about 10 acres on the flood plain of the White River. An eleven stall roundhouse, a roundhouse turntable, a depot, a roadmaster's office, a water tower, and a coal loading facility were constructed there in the 1880's and operated until the late 1910's. By 1919 the roundhouse had been moved to Soldier Summit but helper engines were stationed at Colton until the late 1940's. Wastes generated at the site were likely disposed of on-site or discharged directly to the White River as was the common practice of the day. The railroad facilities at Colton were constructed out of sandstone blocks because concrete was not readily available at the time. The traditional design of roundhouses was that the pits be drained directly to the sewer. Any wastes that were spilled in the pits probably leaked into the ground through the joints between the sandstone blocks or drained directly to the sewer, which at this site was probably the White River. Wastes from the railyard and roundhouse probably consisted of oil, grease, bunker C oil, cleaning solvents, and other wastes common to machine shops and rail service centers as well as materials spilled from railcars. The roundhouse and railyard were in operation from the early-1880's until the late 1910's and other maintenance operations were continued until the mid to late 1940's.

Site Name	COTTONWOOD CANYON MERCURY MILL			
Address	1/2 MI W OF ALUNITE ON NORTH SIDE OF COTTONWOOD CREEK			
City	MARYSVALE	County	PIUTE	ZipCode 84750

Site Description	Contact: Tony Howes (801) 536-4283
-------------------------	---

The site was historically used as a mercury processing mill for the nearby mines that mined the mercury containing ore. Mercury was an essential part of the mining industry for the amalgamation of gold and silver. The site lies on a tributary of Cottonwood Creek. Tailings from the operation were visible on the north bank of the creek. The Creek flows east past Alunite (a aluminum mill) into several irrigation ponds. There are wetlands and recreational activities associated with these ponds.

The plume was detected in 1993 in a monitoring well constructed to monitor cleanup of petroleum contamination in a Utah Power and Light refueling station. TCA was detected at 13.7 ppb and 1, 2-DCA was detected at 8.1 ppb. The drinking water MCL for 1, 2-DCA is 5 ppb. The source of the chlorinated solvent plume has not been identified. A municipal well is located within 300 feet south and slightly side-gradient, of the site. The draft Preliminary Assessment on this site was submitted to EPA for review on 4/22/99.

Site Description	Contact: Bill Rees (801) 536-4167			
The site lies in a industrial section of Salt Lake City. The Diamond Airport Parking facility is currently an airport parking and shuttle facility; previous operations at the site were conducted by ANR Freight. During recent investigations at the site a sludge pit was uncovered. The investigation determined that the sludge pit is approximately 5800 cubic feet. The material in the sludge contains high concentrations of chlorinated solvents and heavy metals. Aerial interpretation of the site show that the sludge pit was installed between March 23, 1982 and April 15, 1983.

Site Description	Contact: Alan V. Jones (801) 536-4287			
The mine site is located on U.S. Forest Service land on the east slope of Dyer Mountain. There are some areas where vegetation is sparse or absent. There are also several tanks, machinery, and a couple of cabins associated with the site which may be contributing contamination to the area. The smelter site is located on 48 acres of land on the east slope of Dyer Mountain. Physical evidence of the smelter include: a slag pile, three cabins, and remains of a 42-inch water jacket blast furnace including its foundation. The slag pile is in direct contact with Anderson Creek.

The El Paso Natural Gas site is a facility that commenced operation in the 1950s and is still active. Natural gas from the nearby Aneth Gas Field is separated at the facility utilizing a kerosene absorption process into liquid petroleum gas and natural gas. The facility produces about 50,000 gallons of propane and 10 to 11 million cubic feet of natural gas daily. Three unlined surface impoundments are present on the site; two for disposal of process water and sanitary waste, and the other for overflow connected with a flare pit. The flare pit is utilized for venting the natural gas, and is coated with an oil sludge.

Groundwater monitoring wells at the American Can LUST Site have 2.5 years of sampling data that indicate the presence of cis-.2-Dichloroethane (DCE) as a component of the contaminant waste stream. The DCE is a component measured in the TPH analysis, usually a major component of the TPH waste stream. Monitoring wells installed upgradient of the American Can LUST remediation indicate that the DCD is originating at an unknown off-site source. The size or extent of the plume is unknown. An Ogden City public safety facility is under construction one block south.

Site Name HILL AIR FORCE BASE

Address 00-ALC/EM

City HILL AFB

County DAVIS

ZipCode 84056

Site Description

Contact: Mo Slam (801) 536-4178

Hill Air Force Base (HAFB) is located in northern Utah, approximately 25 miles north of Salt Lake City and about 5 miles south of Ogden, Utah. HAFB occupies approximately 6,700 acres in davis and Weber Counties. The base is bounded on the west by interstate 15, on the south by State Route 193, and on the northeast by the Weber River Valley. The base is located on a prominent terrace known as the Weber Delta. OU-2: operable Unit 2 (OU 2), one of nine Ous at HAFB, is located along the northern boundary of the Base. Areas investigated as part of OU2 consist of Perimeter Road and two unlined trenches known together as Chemical Disposal Pit 3. The trenches are now obscured by facilities of the Source Recover System (SRS). The SRS was installed as part of an interim remedial action to extract as much of a dense, non-aqueous phase liquid (DNAPL) as practicable. Except for the SRS and Perimeter Road, there are no other buildings or man-made structures in the on-Base portion of OU2. Traffic is sparse and the area is seldom used by HAFB for military activities. Separating the on-Base portion of oU2 from the off-Base portion of OU2 is a steep, terraced, north-facing escarpment that is the south wall of the Weber River Valley. There is about 3000 feet of relief between HAFB and the valley below. Parts of this hillside are unstable and are known as the Weber Landslide Complex. Numerous seeps and springs occur along the hillside. Depending on groundwater table conditions and the season, the springs and seeps discharge water from the shallow groundwater system. At the bottom of the hillside, the land is generally level. Land use in the off-Base part of OU2 is mostly Agricultural and rural-residential in the community of South Weber. There are no hospitals, retirement or nursing homes, schools, nurseries, or day care centers, currently located in the vicinity of OU2. The Bamrough irrigation canal is located adjacent to South Weber Drive.

Site Description

Contact: Not Assigned (801) 536-4100

A resident reported and claims that up to 12 drums of waste were buried on-site under direction of the site owner in 1996. There is also a potential that contaminants are on-site as a result of the historic maintenance activities that took place at the site, while it was a railyard facility for almost 100 years. The site is located in an area of concern due to its close proximity to residents, surface water, and to an unconfined aquifer that is used as a drinking water source. There are approximately 80 homes and mobile homes located within 1/4 mile of the roundhouse.

The Kennecott-North Zone is comprised of areas on or near Kennecott Corporation property near the south shore of the Great Salt Lake. At its Magna operations, Kennecott processes ore taken from its pit about 15 miles south and produces copper and other metals. Ore tailings are retained in a pond near the process facilities. Kennecott purchased the facilities in 1959. The company has continued to reduce contaminant releases over the years by improving the facility smelter and process equipment, process methods, and waste handling procedures.

Site Name	KENNECOTT SMELTER SLAG DISPOSAL				
Address	1 MI E OF LAKE POINT JUNCTION ON I-80				
City	SALT LAKE CITY (WES	County	SALT LAKE	ZipCode	84101
Site Description	Contact: Not Assigned (801) 536-4100 The Kennecott Smelter is located immediately south of State Highway 201. The smelter is built on alluvial fans above which rise the Oquirrh Mountains to the south. The smelter has been in operation for approximately 80 years, during which time slag has been distributed over much of the area of operation. The pile contains slag produced by two different cooling processes: air cooled and water cooled. The slag pile itself no longer receives slag from the smelter. Slag is now slurried and piped to Kennecott's 5500 acre tailings pond located about 1.5 miles to the east. The slag pile is currently being mined by a contractor who sells the slag for road and rail bed, and for sand blasting material.

Site Name	LARK WASTE ROCK AND TAILINGS (KENNECOTT)				
Address	12600 S HIGHWAY 111				
City	LARK	County	SALT LAKE	ZipCode	84040
Site Description	Contact: Not Assigned (801) 536-4100 The Lark Tailings site consists of various abandoned buildings and two mine tunnels: the Bingham and the Mascotte. The Mascotte Tunnel Ditch runs through the site and under Highway 111. Mine waste and tailings located around Lark are left over from mining operations that began around 1905 and ended in the early 1970s. The Lark area was mined for zinc, silver, and lead. When mining ceased, approximately 1.3 million tons of waste material rich in pyrite, galena, and other sulfide minerals were left in various piles around Lark. The material is quite consolidated and has a low chance of becoming airborne. The town of Lark is presently abandoned.

Site Name	LEEDS 5 STAMP MILL			
Address	1 MI N OF LEEDS			
City	LEEDS	County	WASHINGTON	ZipCode 84746
Site Description	Contact: Not Assigned (801) 536-4100			
The Leeds 5-Stamp Mill is located on Leeds Creek in the Silver Reef area. Leeds Creek flows into Quail Creek Reservoir, which is a drinking water source for the St. George area. There are mine and mill tailings with high concentrations of mercury and heavy metals associated with them. The Leeds 5-Stamp Mill was is operation for 10 years until it was converted to a leaching plant which failed due to a copper content. An EPA removal will be conducted on this sie during the Fall of 1999.

Site Description	Contact: Not Assigned (801) 536-4100			
A few rural residences are located to the east and south of the site within a four mile radius and plans have been made for a housing development about 1/2 mile south of the site. The site contains a large heap leach pad, a small collection pond and overflow pond, a levee extending partway across the drainage forming a secondary surface water impoundment, an ore stockpile, and three 72 gallon electrical transformers. The mill area covers .5 acres in the southwest corner of the site. Three electrical transformers are also present in the mill area. A warehouse and test area are located approximately 100 feet northeast of the processing area. The warehouse also contains several transformers. An EPA Removal was conducted on this iste on 2/20/96.

TWO MILLS PROPOSED UNDER ONE DISCOVERY. Two mill sites located side-by-side on the east side of and at the mouth of Mammoth Canyon. Alias: (1) Mammoth Mill, (2) Farrell Mill, (3) Sioux Mill. Both mills were built (1890-93?) at the mouth of Mammoth Canyon. Mills and smelters are noted in some historical accounts as having been located within the town of Mammoth as early as 1873. The mills operated until 1899 when rail rates decreased and ores were sent to Salt Lake for smelting instead of milling.

Address	6400 TO 7200 SOUTH AND JUST WEST OF I-15				
City	MIDVALE	County	SALT LAKE	ZipCode	84047
Site Description	Contact: Not Assigned (801) 536-4100 Secondary 7.5 minute quad map: Salt Lake City South. The town was originally known as Bingham Junction and was a major rail diversion point used by the Denver and Rio Grande Railroad to ship ore from the Bingham Canyon, Alta, and perhaps Tintic mining areas to the smelters and mills at Sandy, Midvale and Murray. The first rail lines were constructed in the area in 1873 and the rail lines were used to serve a steel mill in the area into the 1970s. There are also several sidings which were used to transfer railcars and some of these sidings are still in existence. We assume, that like other railyards in the valley, the Midvale Railyard was built using waste materials from mining and smelting operations and as such, heavy metals are likely present at this site in addition to the wastes associated with the roundhouse.

Site Description	Contact: Alan (Al) M. Jones (801) 536-4115 The town of Midvale was originally known as Bingham Junction and was major rail diversion point used by the Denver and Rio grande Railroad to ship ore from the Bingham Canyon, Alta, and perhaps Tintic mining areas to the smelters and mills at Sandy, Midvale and Murray. A 10-stall roundhouse was located here where locomotives were repaired from the 1880s to the 1920s. The foundation to the old round house still exists and the Mineral Fertilizer Company constructed their warehouse using the existing foundation during the 1950s. The Mineral Fertilizer company is still in operation at the site. We assume that heavy metals associated with mine wastes might be present at this site in addition to the wastes associated with the operation of the roundhouse.

Site Description

Contact: Elizabeth Yeomans (801) 536-4092

The 530-acre Midvale Slag Superfund Site is located 12 miles south of Salt Lake City, Utah and is almost completely within the city limits of Midvale. Operable Unit I (OU1) encompasses approximately 330 acres and is bounded by 7250 South Street to the south, the Jordan River to the west, 6400 South Street to the north, and 700 West Street to the east. OU1 also includes the Winchester Estates area, the abandoned Midvale Wastewater Treatment Plant (WWTP), and the lagoons area. The OU1 area is located in the Salt Lake Valley and lies on the Jordan River floodplain. Sand and gravelly fill materials from an I-215 highway construction project has been spread over the southeastern portion of OU1. The top 30 feet of the native zone soils is an organic, sticky clay, silty in places and becoming sandier downward. Slag layers occur within the native soil zone throughout OU1 and correlate with the presence of relatively high metals content based on chemical analysis. The shallow water-bearing zone is unconfined with typical water table depth between 5 and 20 feet below the ground surface. Generally, ground water flow in the Upper Sand and Gravel Aquifer is northwesterly, but varies seasonally from south westerly to northerly beneath portions of the site. Little information is available describing historical activities on OU1 prior to the 1940s. It is generally believed that the land was used as pasture with no industrial activities. Disposal of domestic trash and household goods in a small landfill occurred in the southwestern portion of OU1 from approximately the 1940s until a landfill was established by the county in the 1960s. The South Valley Water Reclamation District operated the Midvale WWTP on the southern portion of OU1 from 1959 to 1986. The plant originally consisted of a trickling filter system with an aerated lagoon system, consisting of three lagoons, being added in 1976. The lagoons were closed in 1986 according to an approved Closure Plan.

Mill was built in 1873, adjacent to and north of the present-day public library. The mill processed ores from the Hickory mine in 1873 and 1874. It was then shut down for a couple of years and later operated for a few months in 1876. The S1 sampling of site occurred in 5/99. The S1 ARR will be developed and submitted to EPA after the analytical results are received.

Site is a railroad yard which has serviced the Milford area since 1880. Numerous tracks currently exist in the yard, as well as a depot. A larger depot, former roundhouse, and service area which serviced trains into the 1940's have been dismantled. The S1 work plan was submitted to EPA for review in 3/99.

The site was reportedly a smelting furnace that operated in the late 1800's to early 1900's. The facility smelted ores of lead, copper, silver, and gold. The exact address of the facility is unknown. Heavy metals such as lead and arsenic are commonly associated with smelting facilities in the Salt Lake Valley. There is a high potential for heavy metal contamination of various media at the site and in the surrounding area.

<p>The site is located approximately twelve miles east of the Great Salt Lake in an area consisting of mixed industrial, commercial and residential use. The site occupies approximately 2 to 3 acres. Historically, the site contained several buildings which included a coal storage area and a gasometer used to hold the manufactured gas. The Ogden plant operated from around 1889 until 1929, when a natural gas pipeline was installed in Ogden. The main process conducted on the site was the gasification of coal to produce gas for street lighting and home use.</p>

The Pallas Yard site is approximately 170 feet wide by 4,400 feet long. The Pallas Yard was originally developed at the turn of the century to support smelters in the area. There are presently five sets of tracks in the yard: three sets along the west side, and two sets along the east side. The Pallas Yard is located in an area of mixed commercial, light manufacturing, and residential land uses. The Pallas Yard will be used as the TRAX Light Rail right-of-way and as a switching yard for the Salt Lake City Southern Railroad for the foreseeable future. Withdrawn from the VCP on October 31, 1997.

Site Description

Contact: Robert O'Brian (801) 536-4100

Former oil and chemical treatment/recycling facility in Salt Lake City. The Petrochem/Ekotek Site (the Site) is located in Township North, Range I West, Section 23, and occupies approximately seven acres in an industrial corridor in the northern section of Salt Lake City, Utah. The Site is bordered on the north by an auto dismantler/recycler, and on the west, east and south by industrial/commercial properties. A residential district with approximately 50 homes is located to the south within 500 feet of the Site. The Salt Lake City Planning Commission Master Plan for the area of the Site designates the land use as heavy industrial. Interstate Highway 15 is located to the west and the Wasatch Mountains are located to the east of the Site. Three oil refining and related facilities are located near the Site, one less than a quarter mile to the south and two less than two miles north of the Site. An EPA Superfund Site, Rose Park Sludge Pit, is located approximately 1,500 feet southwest of the Site. Utah Metal Works is located 1,00 feet south of the Site. The Utah Metal Works is a metal reclaiming/recycling facility that formerly processed transformers, containing polychlorinated biphenyls (PCBs), for salvage. The property is divided by a railroad right-of-way into eastern and western portions which are enclosed by a 6-foot (ft) chain link security fence. A security company provides daily walk-through and drive-by security. The property was operated as a used oil refinery and oil reclaiming/recycling facility from 1953 through 1988. The majority of the site operations occurred on the western portion of the property. The northwestern portion of the property, north of the main warehouse, contained the majority of the equipment used for oil refining reclaiming, and recycling, including approximately 60 above ground tanks, ranging in capacity from less than 1,000 to 90,000 gallons. The tanks and associated equipment and materials were removed.

The Pioneer Landfill covers approximately 250 acres. Several homes and buildings are located near the northeast perimeter of the landfill. The area in which the landfill is located is essentially rural. The site has historically been used for agricultural purposes; primarily for the raising of livestock. In 1968 the property was leased to Salt Lake County and was used as the primary landfill for Salt Lake County until 1975. From 1968 to 1975 the landfill received approximately 1.1 million tons of waste. Pioneer Landfill was operated using trenching and filling methods.

Site Name	PORTLAND CEMENT (KILN DUST 2 & 3)				
Address	1000 SO. REDWOOD ROAD				
City	SALT LAKE CITY	County	SALT LAKE	ZipCode	84116
Site Description	Contact: Not Assigned (801) 536-4100				
The 70-acre site is located in Salt Lake City, Utah within a triangular area, defined by Indiana Avenue, Redwood Road, and the Jordan River Surplus Canal. The site is a former dumping ground for cement Kiln Dust (CKD) and Chromium-bearing kiln bricks, by-products of the cement manufacturing process. There is an estimated 500,000 cubic yards of CKD and 360 tons of chromium-bearing bricks at the site.

The Revere Smelter is a lead smelter that operated in 1881. It was a facility constructed to roast and leach gold and silver bearing ores. It consisted of a rotary dryer, crusher, pulverizer, single stamp battery, Brewster roasting furnace and leaching wats. It produced gold and silver concentrates. The facility may have produced tailings and slag that were deposited in the Bingham Flats area of Bingham Creek channel.

The Richardson Flat Tailings site consists of 160 acres. From 1975 until 1981, mine tailings from the Keetly Ontarion Mine and other mining operations in the area were disposed of at the site and currently range up to 10 feet in depth. Until 1987, mine tailings were removed from the site and used as backfill for sewer construction projects. Currently, mine tailings at the site are being covered by soil excavated from on-site areas. Site features include a pond that covers the northeastern corner of the site and is contained by a dam at the northwestern corner, and a ditch in the central portion of the site.

Address	2034 W 2300 S				
City	WEST VALLEY CITY	County	SALT LAKE	ZipCode	84119
Site Description	Contact: Tony Howes (801) 536-4283				
This site is located at 2034 West 2300 South in Salt Lake City, UT. This site operated from the late 1980's to the late 1982's. Santa Clara Circuits produced a listed waste (FOO6) which is a waste water sludge. The sludge was illegally dumped in Tooele County. IT was also reported that they were dumping acid on the ground behind their Salt Lake Oddice. Today most of the ground is paved and there is a new building where the acid was allegedly dumped. Salt Lake Circuits is now working in the Sant Clara Circuits building and is most likely using the sme equipment. The potential hazard at Santa Clara Circuits would be to workers in the screen room which previously had no ventalation. Also, the soil around their septic tank where they dispose their "neutralized acid water, could be contaminated.

Site Name	SHARON STEEL CORP. (MIDVALE TAILINGS)			
Address	7800 SOUTH 700 WEST			
City	MIDVALE	County	SALT LAKE	ZipCode 84047
Site Description	Contact: Elizabeth Yeomans (801) 536-4092			
The 270-acre Sharon Steel/Midvale Tailings site is located in Midvale, Utah, approximately 12 miles south of Salt Lake City. Operable Unit (OU) 1 is defined by the Sharon Steel property boundaries and is the source of contamination. OU 2 is comprised of residential and high use public areas located adjacent to the Sharon Steel property which contain contamination primarily from windblown tailings. The site is bounded on the north by 7800 South Street, on the north east by South Holden Street and Lenox Street, on the southeast by Main Street, and on the west and south by the Jordan River. The western border extends to include a smaller 2.3 acre tailings pile on the western side of the Jordan River. OU 1 includes the tailings and a wetlands area to the south. The main feature of OU 1 is an estimated 9 million cubic yards of sand like tailings which remain on-site. The tailings from the mill are located on the Jordan River floodplain. There are a number of public drinking water supply wells within a three-mile radius of the site, most of which use the deep Aquifer, and serve approximately 440,000 people. The Sharon Steel/Midvale Tailings site includes a former milling operation originally owned and operated by the U.S. Smelting, Refining and Mining Company, later known as UV Industries, Inc. The mill operated from 1906 to 1971. During the milling operation, sulfide concentrates of lead, copper, and zinc were extracted from the ore by froth flotation. The facility operated as a custom mill, receiving ore from many sources, then concentrating and extracting a variety of metals. The tailings from the milling operations are located at the mill site (OU1) in uncovered piles over 50 feet deep, and have an estimated volume of 9 million cubic yards. The tailings are fine grained and the piles resemble sand dunes. Sharon Steel Corporation purchased the mill site in 1979.

Site Name	SILVER CREEK TAILINGS				
Address	INTERSECTION HIGHWAY 224 & US 40				
City	PARK CITY	County	SUMMIT	ZipCode	84060
Site Description	Contact: Not Assigned (801) 536-4100				
The Silver Creek Mine Tailings/Prospector Square site is located approximately 1/2 mile northeast of Park City's business district. The Park City District has been the site of precious metal mining since 1986. The processing of millions of tons of ore over the decades has generated a large volume of mine tailings. These mine tailings have been disposed in various areas near Park City, including the Silver Creek Mine Tailings/Prospector Square site. Mine tailings generally contain elevated levels of heavy metals including arsenic, cadmium, chromium, lead, and zinc. Mill tailings were deposited on Prospector Square from the early 1900s to 1930s. Currently, the site is occupied by roads, residences, landscape, parking lots, or retail buildings. Approximately 2 acres of uncovered tailings remain.

Site Name	STATE MOTORCYCLE PARK				
Address	12600 S HIGHWAY 111				
City	LARK	County	SALT LAKE	ZipCode	84065
Site Description	Contact: Not Assigned (801) 536-4100				
The State Motorcycle Park site is largely covered by semiconsolidated to loose, fine-grained tailings material. The loose, usually white to tan tailings transport easily and form well-developed dunes. Past surface water erosion has left channels in more consolidated areas. A network of sludge ponds is located at the western edge of the motorcycle park and a couple piles of coarse mine waste exist west of the park and east of Highway 111. The area west of the park and east of the highway contains some trees and wetland-like areas. Areas to the south, east, and north of the park are farmland. Mine waste and tailings located around the State Motorcycle Park are left over from mining operations which began around 1905 and ended in the early 1970s.

Site Name	SYRO STEEL CO				
Address	950 W 400 S				
City	CENTERVILLE	County	DAVIS	ZipCode	84014
Site Description	Contact: Not Assigned (801) 536-4100				
This site is located at 950 West 400 South in Centerville, UT. Before 1974 SYRO Steel used two unlined ponds to dispose of their spent pickling liquor, these ponds have since been filled with dirt (one pond has had lime added). Soil from the ponds and surrounding soil (due to migration) may contain high quantities of lead, chromium and selenium. Soil samples taken from one of the old ponds by SYRO show total metal of 570ppm Pb and 50ppm CR. Because the ponds were unlined and the water table is relatively high there is potential for ground water contamination. Also soil surrounding the pond could be contaminated by past migration of pickle liquor.

Alias: Jesse Knight Smelter. The mill was built in 1908 on the outskirts of the present day ghost town of Silver City, Utah. Before the end of 1908, two lead furnaces, each having a capacity of 250 tons, were operating and a copper furnace was about to be placed in operation. Two additional lead furnaces, making four in all, were added in 1909. The smelter was dismantled by Knight in 1915 and it was moved to Salt Lake City. Population targets are present within one-half to one-plus miles of the site. A leach pad which is in closure is located @ 2,000 feet to the south

Address	2 MILES EAST OF GOSHEN			
City	GENOLA	County	UTAH	ZipCode 84633
Site Description	Contact: Tony Howes		(801) 536-4283	
The mill was built on a hillside along the east side of Goshen Valley near Warm Springs, two miles east of Goshen, during 1919 & 1920. Completed in 1920 at a cost of \$580,000, the mill began operations in 1921. By March 1921, the mill treated about 170 tons of ore per day, increasing to 200 in 1922 after two furnaces for roasting sulfide ores were added. Operations used the "Augustin process" which used an acid-brine chloridizing and leaching mill. Ore was first roasted with salt, then leached in a strong brine solution, and then precipitated with copper. The mill closed in the fall of 1925.

Site Name TOOELE ARMY DEPOT (NORTH AREA)
Address HIGHWAY 36, 1 MI WEST OF TOOELE
City TOOELE **County** TOOELE **ZipCode** 84074

Site Description **Contact:** Rik Ombach (801) 536-4164

The 24, 732-acre Tooele Army Depot-North Area (TEAD-N) site is an Army Ordinance Depot located in Tooele Valley in Tooele County, Utah. The facility is located approximately 35 miles southwest of Salt Lake City. There are 7 operable units (OU) containing 17 solid waste management units (SWMUs) at TEAD-N. Ground water in Tooele Valley is mainly found in the alluvial valley fill deposits and depth to the regional ground water aquifer under the facility is generally over 200 feet. Box elder Wash and South Willow Creek both cross the site near its western boundaries. Except for the city of Tooele, properties immediately adjacent to TEAD-N are undeveloped. Properties to the north are used for pasture or cultivation; properties to the west and south are used for rangeland grazing; and properties to the east consist of Tooele and undeveloped rangeland along the lower western slopes of the Oquirrh Mountains. There is on-base housing for both civilians and military families in the administrative area. TEAD-N was established as the Tooele Ordinance Depot on April 7, 1942. During World War II, TEAD was used as a back-up depot and stored vehicles, small arms, and other equipment for export. Currently, TEAD is one of the major ammunition storage and equipment maintenance installations in the U.S. However, portions of the installation are slated for closure under Base Realignment and Closure (BRAC) Actions. This Record of Decision (ROD) consists of four Operable Units (OU) containing the six SWMUs for which sufficient information exists to establish appropriate response actions. OU 5 SWMU #17 Former Transformer Storage Area OU 5 SWMU #33 PCB Storage Building 659 OU 6 SWMU #9 Drummed Radioactive Waste Area OU 6 SWMU # 18 Radioactive Waste Storage Building OU 7 SWMU #5 Pole Transformer PCB Spill OU 10 SWMU 41 Box Elder Wash Drum Site.

Site Description **Contact:** Alan V. Jones (801) 536-4287

Groundwater monitoring wells at a Tremonton, UT LUST Site confirm the presence of Tetrachloroethene (PCE), Trichloroethene (TCE), Benzene and TPH. Upgradient monitoring wells may indicate that the plume is originating at an unknown off-site source. The size or extent of the Plume is unknown, but it has been proven to be present under residential housing, commercial businesses, restaurants, and grocery stores.

Site Description	Contact: Not Assigned (801) 536-4100				
Soil gas testing conducted by URS Operating Services as part of an investigation of the Mount Olivet Cemetery Plume, identified 3.4 ppb of Trichloroethene (TCE) and 49 ppb Perchloroethene (PCE) in soil gas drawn from a test hole next to Building 515 of the University of Utah. The University indicates that Building 515 was used for chemical storage during the approximate period of 1980-1992. However, the University also indicates that they do not believe PCE or TCE were part of the chemicals stored in Building 515. The building is in the recharge area for the Salt Lake Valley and immediately adjacent to University office buildings.

The 151st ARG of the Utah Air National Guard is located on the east side of the Salt Lake City International Airport. The Base occupies approximately 135 acres. Land uses in the vicinity of the Base include limited agricultural, industrial, recreational, and urban residential areas. The site has been a leaking underground storage tank (LUST) site for over 2 years. Solvents were discovered in the soil and groundwater (TCE, 1, 1-DCE, and 1,1,1-TCA).

Site Description	Contact: Not Assigned (801) 536-4100				
Utah Metal Works operates a metal salvage yard located on 5 acres of land. UMW owns about 3 acres of the site on which office, storage, and metal processing facilities are located. UMW began operations in 1956. These operations included handling and processing transformers and capacitors, a practice that continued until 1984. UMW currently receives scrap metals from primarily local sources and processes them according to customer specifications. Scrap processing operations may include crushing, shredding, packaging, and shipping. UMW has received and scrapped electrical distribution transformers from various sources in the past. Transformer salvaging operations involved handling transformer oil that may have been contaminated by PCBs.

Site Name	VERNAL AVENUE TCE PLUME			
Address	50 SOUTH VERNAL AVE			
City	VERNAL	County	UINTAH	ZipCode 84078
Site Description	Contact: Michael Zucker (801) 536-4100			
The plume is located in the City of Vernal, Utah. The area is in a commercial and residential area. The site has historically been the down town part of Vernal for many years. The plume of TCE has been detected at a near by irrigation well a resident at 50 South and 50 East. The TCE was determined to be substantially above the EPA water quality MCL's, by the local health department. It is likely that the contamination is originating from multiple sources in the area. There are three dry cleaners and two automotive body shops in the immediate vicinity. There are eleven municipal drinking water wells within one mile of the suspected source, and 1/4 mile from the plumes leading ledge.

Address	2 MI FROM THE UTAH/IDAHO BORDER			
City	GROUSE CREEK	County	BOX ELDER	ZipCode 84313
Site Description	Contact: Not Assigned (801) 536-4100			
The Vipont Mine site consists of lower and upper tailing piles, a heap-leach processing area, Quonset hut, and mine adits. The entire site area is approximately 11.8 acres. Also located on the site are numerous empty 55 gallon drums. The mine site originally operated in the early to middle 1920's as a silver mine. Tailings were directly deposited into Birch Creek during this period of the mine operations. In 1977, the VMS was designated to be used as a cyanide heap-leach facility for the reprocessing of silver and gold ore from underground mining and existing tailings.

Site Name	WELBY RAILYARD				
Address	4200 WEST OLD BINGHAM HWY				
City	WEST JORDAN	County	SALT LAKE	ZipCode	84088
Site Description	Contact: Alan V. Jones (801) 536-4287				
The town was a major rail diversion point used by the Denver and Rio Grande Railroad to ship ore from Bingham Canyon to the smelters at Garfield from about 1905 to 1920. Historically, a roundhouse and several sidings used to transfer railcars were located at the site. The rail right-of-way still exists and tracks still run through the area although it appears that they are no longer used. Development in recent years has brought subdivisions to the boundaries of the rail right-of-way. We assume, that like other railyards in the valley, the Welby Railyard was built using waste materials from mining and smelting operations. If this is the case, heavy metals are likely present at this site in addition to the wastes associated with the roundhouse.

Tetrachloroethene (PCE) in soil has been detected during an underground storage tank removal and closure operation at the West Jordan Top Stop #C-27. Staining and odor in soil at a depth of 7 feet was noted during excavation of the used oil tank. Two soil samples from under the tank were collected and analyzed for oil and grease. Total petroleum hydrocarbons, and VOC. PCE (1,200 and 1,800 ppb) was detected in both samples. The soil is a lean clay (cl). Volatile aromatic hydrocarbons (430,000 ppb) were also detected. Top Stop #C-27 is an operating gasoline and service station with four licensed and regulated underground storage tanks (UST).

Site Name	WESTERN GOLD FLOATATION MILL			
Address	NORTHERN END OF WHITE REEF, 1 MI W OF LEEDS			
City	LEEDS	County	WASHINGTON	ZipCode 84746
Site Description	Contact: Neil Taylor (801) 536-4102			
The Western Gold Flotation Mill is located at the north end of White Reef. All that remains of the Mill are the wooden and concrete remains on the eastern slope of Barbee Gulch. Mining and mill tailings are present at the base of the east slope of Barbee Gulch. In 1956 a flotation mill to process ore from several of the mines was constructed. From 20,000 to 30,000 tons of ore and tailings were processed for silver, copper, uranium, and vanadium. The mill closed in 1959. The S1 ARR on the site was submitted to EPA for review on 3/5/98.

Address	643 SOUTH 800 WEST			
City	WOODS CROSS	County	DAVIS	ZipCode 84087
Site Description	Contact: Alan V. Jones (801) 536-4287			
The Woods Cross 800 West Plume site consists of truck terminal operations including a wash rack & fueling stations & associated operations located at 643 South 800 West, Woods Cross, Utah. During an EPA/DERR investigation of chlorinated solvent contamination in the area, chlorinated solvents were discovered in soil gas samples immediately down-gradient and west of the former truck terminal wash rack & fueling station, using a Geoprobe remote sampling device. Additional investigation of the site has demonstrated that chlorinated solvent contamination is primarily isolated to the areawhere the wash rack & fueling station were located.
